Looks like the SVE event helped with the methane levels.

Subject: Michigan Plaza - Methane Monitoring and Mitigation - April 18, 2014 Update

Good morning:

MUNDELL completed methane screening activities on Wednesday April 16, 2014.

Methane concentrations were below 10% of the LEL (5,000 ppm) at all locations, indicating that last week's mitigation activities were successful in decreasing elevated methane concentrations in soil gas. MUNDELL will continue monitoring the methane concentrations in the soil gas and provide weekly updates.

Attached is a pdf summary of methane readings collected through April 18, 2014.

Sincerely,

[Matthew Bono](#)
